EMPLOYMENT OPPORTUNITIES IN THE INDIAN RENEWABLE ENERGY SECTOR

Kanika Verma

India is a country that is on the forefront of the renewable energy transition, with 93 gigawatts of installed capacity as of February 2021. With rising fuel prices, threat to energy security, climate change issues and the dire need of growing both, economically and sustainably, the country has one of largest expansion plans for renewable energy globally. Consistent with India's journey towards renewable energy, the share of coal based installed energy capacity has gone down from approximately 60% in 2015 to about 56% four years later in 2019.

Leading the renewable energy revolution, in 2015, during COP21 India declared ambitious government commitments for a new India powered by clean sources of energy. Not only is India focusing on building a new India, but we are continuously leading coordinated efforts to build a new world powered by clean energy sources. Currently, India stands at the 5th position for overall installed capacity. With a 226% increase in the renewable installed capacity in the last 5 years, we have become global leaders and are continuously revising targets upwards to tap the immense potential we have within the sector.

Currently India has a target of 175 GW of renewable energy by 2022 and 450 GW of renewable energy by 2030. In the fight towards clean energy, the government had started the National Solar Mission in 2010. While renewable energy generation was one of the targets of the mission, the government also cited job creation as part of its rationale. India can almost double the number of jobs being generated within the power sector by 2030 by following an ambitious decarbonisation pathway.

Renewable technologies are more labour intensive than the mechanised fossil fuel technologies and can thus provide tremendous job opportunities for the domestic markets. During the past decade, the number of employees in the coal sector have gone down considerably due to increasing mechanisation. Between 2000 and 2015, within the coal-mining sector alone, due to mechanisation, close to 105,000 jobs have been lost. Within the renewable energy market, small scale hydro, rooftop solar and biomass are known to create maximum employment for evet megawatt of installed capacity. For instance, construction and running per megawatt of a rooftop solar project employs 24.27 people, small hydro project employs 13.84 people, and a biomass project employs 16.24 people.

As per future estimates, it is expected that within the power sector, the workforce shall increase quite considerably and may reach 3.5 Million (Mn) by the year 2050. Similarly, the renewable energy sector is expected to employ 3.2 Mn people by the same year and could employ five times more people than the entire Indian fossil

CAREER AS A MOLECULAR & CELL BIOLOGIST

Nidhi Prasad

Every disease that's with us is caused by DNA. And every disease can be fixed by DNA.

—George M. Church

Molecular biology is the study of the structure function, and makeup of the molecular building blocks of life. It focuses on the interactions between the various systems of a cell, including the interrelationship of DNA, RNA and protein synthesis and how these interactions are regulated.

The youngest of the biosciences, molecular biology is closely interrelated with the fields of biochemistry, genetics and cell biology.

It is presumed that all cell functions, which are incredibly complex and incompletely understood, take place on a molecular level. This means that the sophisticated interconnection and cooperation of biological molecules is what makes life possible, which is an intriguing subject that puzzles molecular biologists and motivates them to discover the secrets of cells. A molecular biologist is preoccupied with exploring, understanding or teaching the concepts behind cellular structure and function on a molecular level.

Molecular biologists must be proficient in numerous subjects and sciences before they can effectively conduct research or academic activity in their field.

Molecular biologist examines plant, animal or human genetics and the variation and relationships between them. If you wish to be a part of this process wherein you get to study DNA as well as RNA of living organisms then you can go for a career as molecular biologist. There are several opportunities in the field of molecular biology and it can be a wise career choice.

WHAT DO MOLECULAR BIOLOGIST DO?

A career as molecular biologist involves studying the behaviour of cells in various conditions and their functional structure.The Molecular and Cellular Biologist will research and study cellular molecules and organelles to understand cell function and organization.

A career as a molecular biologist requires to spend hours to understand the complex molecular networks of a single molecule to inspect the activities of a cell during life processes.

- The prime responsibility in the career as a molecular biologist is to altering genetic properties of molecules to cure or slow disease infestation.
- Conducting experiments and study to understand the evolutionary processes such as reproduction, birth, and death of plants, animals, humans and other living organisms.
- Analyzing functioning and mechanism of cells.
- Designing molecular or cellular laboratory experiments, overseeing their execution, and interpreting results. Maintaining accurate laboratory records and data.
- Conducting research on cell organization and function, including mechanisms of gene expression, cellular bioinformatics, cell signaling, or cell differentiation.
- Performing laboratory procedures following protocols including deoxyribonucleic acid (DNA)

CAREER AS A MOLECULAR & CELL BIOLOGIST

sequencing, cloning and extraction, ribonucleic acid (RNA) purification, or gel electrophoresis.
- Preparing reports, manuscripts, and presentations.
- Monitoring or operates specialized equipment such as gas chromatographs and high-pressure liquid chromatographs, electrophoresis units, thermo-cyclers, fluorescence activated cell sorters, and phosphor-imagers.
- Using of digital tools to construct DNA and molecular modeling of living organisms. On a daily basis a molecular biologist interacts with several digital tools which makes their work easier.
- Coordinating molecular or cellular research activities with scientists specializing in other fields. Evaluating new technologies to enhance or complement current research.
- Developing guidelines for procedures such as the management of viruses.
- Ensuring that financial, physical, and human resources assigned to research or development projects are used as planned.

The reason why research in molecular biology is so important is because the concepts discovered in this manner can be applied to mainstream biology, medicine, wildlife study and protection of endangered animals, food industry, pharmaceutical industry and environment protection. Research in molecular biology literally aims to discover the essence of life and formulate theories of biological function that are applicable in other science fields and in real life.

ELIGIBILITY

The programs in Molecular Biology are offered mainly at post-graduation level. A candidate would be eligible to pursue M.Sc in Molecular Biology if he/she has studied Biology at the Intermediate and Graduation Level. A B.Sc. in Genetics, Microbiology, Zoology or Botany also fulfil the eligibility criteria of pursuing M.Sc in Molecular Biology.

In order to be eligible for carrying out research work in the field, one must qualify the CSIR-UGC-NET exam or ICMR JRF examination with Life Science. Engineering or B.Pharm graduates with Biotechnology as a subject of study, having qualified in GATE examination with a minimum of 85 percentile may also apply for award of Research Fellowship subject to their qualifying in the written test/interview.

STUDY ROUTE

10+2

The first step for pursuing a career as a molecular biologist is successful completion of 10+2 in physics, chemistry and biology (PCB) with minimum 50 per cent marks.

Graduation

One must pursue a bachelor of science or B.Sc. in life sciences or related subjects with a concentration in molecular biology. Some bachelors courses that are being offered by universities in becoming a molecular biologist are:
- B.Sc. (Bachelor of Science) Chemistry
- B.Sc. (Bachelor of Science) Bio Chemistry
- B.Sc. (Bachelor of Science) Biology
- B.Sc. (Bachelor of Science) Pharmaceuticals
- B.Sc. (Bachelor of Science) Life Sciences
- B.Sc. (Bachelor of Science) Biotechnology
- B.Tech. (Bachelor of Technology) Biotechnology

The admission is provided on the basis of evaluation of student's performance in the entrance examination. Several other colleges and institutes provide admission on a basis of a 10+2 passing percentage.

Post-Graduation

A master's degree in the related subjects is considered a bonus point to bag the entry-level job opportunities. A doctoral degree or PhD in the specialisation of physics, chemistry, biochemistry, biology or related subject is required for senior roles.

Once a bachelor's degree is completed, students have several options to lead a molecular biologist career path. Mentioned below are major two options to establish a successful career as molecular biologist.

Option 1: Candidates can start working in the industry at an entry-level position after the successful completion of a bachelor's degree. After acquiring an experience of few years, they can further opt for a master's degree programme in a biochemistry or related specialisation to progress in the career as a molecular biologist.

Option 2: Candidates after successful completion of a bachelor's degree can opt for a master's degree programme without any gap in the academic year. Further, they can start working in the industry in an entry-level role. Major master's degree programmes to establish a career as a molecular biologist are:
- M.Sc. (Master of Science) Botany
- M.Sc. (Master of Science) Molecular Biology
- M.Sc. (Master of Science) Biology
- M.Sc. (Master of Science) Biochemistry
- M.Sc. (Master of Science) Chemistry
- M.Tech. (Master of Technology) Biotechnology

Students aspiring to opt for a career as molecular biologist can find good internship opportunities in biotech and pharmaceutical companies. The companies hire interns to assist in the assessment of biochemical activities under diseased conditions. One can find various options through recruiting websites such as naukri.com, Glassdoor, Internshala, letsintern and other online platforms.

Given below are few certifications and internships available that can be helpful in becoming Molecular Biologist.
- DNA: Biology's Genetic Code
- Proteins: Biology's Workforce
- Biostatistics and Mathematical Biology
- Molecular Biology
- Image Analysis Methods for Biologists
- Principles of Synthetic Biology

SKILL SET REQUIRED

Communication Skills: It is an essential aspect of a career as a molecular biologist. Communication in the workplace is very important to businesses because it helps industries to be productive and operate more efficiently. A molecular biologist must effectively communicate his or her ideas and results of experiments to other colleagues and stakeholders.

Interpersonal Management: Interpersonal skills are essential irrespective of the profession, as it allows staff to create and maintain positive working relationships with each other and to their stakeholders, lead to growing organisations and the company's effectiveness. A career as a molecular biologist requires working in a team.

Organising Skills: A career as a molecular biologist requires strong organising skills to manage things efficiently. He or she has to design, plan, organise, and execute the projects to complete within a given schedule.

CAREER OPPORTUNITIES

As science has developed and people are more aware of the technology. A career as a molecular biologist opens doors to some of the most wonderful opportunities. A career as a molecular biologist provides several work places to perform duties such as
- Laboratories
- Private industries
- Government agencies - While in government agencies, they are involved in researching to find the cure or treatment of diseases
- Hospitals
- Universities
- Research firms
- Pharmaceutical companies
- Molecular biologists serve as consultants and advise on environmental issues in the private industry.

Jobs related to this field

Post-graduates in Cell and Molecular Biology have job opportunities such as:

Molecular Biologist

A molecular biologist studies molecules or different parameters that affect them. They get down to the genetic level and study and define what processes can affect the functioning of a gene and how they can manipulate it to their advantage.

Cell Biologist

Cell Biologist studies how a cell develops, what is the purpose of said cell, what are the functions and interactions it has with other cells in a system etc. The genetics of the cell also plays a vital role in its study, hence cell biology often studied along with molecular biology to gain a better understanding.

Genetic Counselor

A genetic counselor is someone who provides information on the inheritance of certain illnesses and their risks, he/she deals with patients with regards to their families and what options they have when confronted with these results. These individuals can be employed in clinics, hospitals, companies, and scientists in order to help interpret and market the results. They have a major role to play especially in healthcare when it comes to policymaking and also the dissemination of information.

Molecular Lab Specialist

Armed with a Cell & Molecular Biology degree, you can find your place in a company as a Molecular Lab Specialist. The job description entails handling, planning, and executing protocols with respect to the current project a company is focusing on.

Pathologist

A pathologist works with body fluids and tissues. Pathology helps to provide a clearer picture of any health or medical issues a patient is suffering from. A doctor's diagnosis can be confirmed from the interpretation of the results provided by the pathologist.

Epidemiologist

As an epidemiologist, your role would be to detect the cause of the disease, the source, the outcome, the risk factors involved, and also you will develop a plan on how to control and stop the spread of said disease. And also come up with solutions on how to prevent it from happening again. This is an opportune time to look for opportunities in this field since we are still in the midst of the pandemic.

Toxicologist

A toxicologist studies the effects of chemicals on living systems. To possibly understand the good and the bad effects of chemicals, an understanding of the cell and molecular levels of the system in a study is necessary. You will be involved in conducting experiments and recording and analysing the data which will be useful to study the risks and safety of a product being used.

Forensic Analyst

A forensic analyst will be working with lawmakers to help solve crimes. A thorough investigation of the crime scene with strict protocols followed to collect and analyse the evidence. Since the job involves a combination of pathology & toxicology work, molecular and cell biologists can forge a career in this field.

Clinical Research Specialist / Clinical Research Assistant in Hospitals

Clinical Trials are the need of the hour now. As long as there are clinical trials, there will be a requirement for Clinical Research Assistants/Associates & Specialists. You will be hired either by the government, companies, or hospitals based on the type of clinical trials. The main job description includes conducting experiments, designing and executing protocols, and interpreting the results. Be it humans or animals, a cellular and molecular level understanding is required, and hence cell & molecular biologists can find a footing in this field.

Certain companies will need people who can understand the results and also market them to the target customers. Sales Executives, Technical Specialists, Regulatory Affairs Executive, Scientific & Product Managers need to know how the product works through and through to be able to make a good sales pitch, knowing the technical jargon is an advantage and if you have the academic backing and the gift of the gab then this is the job for you.

With a Ph.D., one can get a higher-level job in the R&D department of pharmaceutical, medical devices, forensic and industrial companies. The job demand for Molecular Biologists is expected to grow 19% by 2022, which is much faster than most other occupations. The increase in human lifespan and aging of the baby boomer generation will increase demand for medicines and other studies targeting chronic disease.

How and Why are Cyclones Named?

The Arabian Sea saw its fourth pre-monsoon cyclone in four consecutive years 'Tauktae' that made its landfall in Gujarat on May 18, 2021. A tropical cyclone is an intense circular storm that originates over warm tropical oceans and is characterised by low atmospheric pressure, high winds, and heavy rain or thunderstorms. The word Cyclone is derived from the Greek word 'cyclos' meaning the coils of a snake. It was coined by Henry Peddingtonto whom the tropical storms in the Bay of Bengal and the Arabian Sea appeared like coiled serpents of the sea.

The name 'Tauktae' (pronounced Tau'Te)was suggested by Myanmar which translates to gecko, a "highly vocal lizard". But why was the tropical cyclone given this peculiar name?

How are cyclones named?

According to the World Meteorological Organisation (WMO), tropical cyclones,in general,are named according to the region-specific rules. In the Atlantic and in the Southern Hemisphere (Indian Ocean and South Pacific), tropical cyclones receive names in alphabetical order, and women and men's names are alternated. However, in the 2000, nations in the Northern Indian Ocean began using a new system for naming tropical cyclones where names are listed alphabetically country wiseand are gender neutral. The common rule is that the name list is proposed by the National Meteorological and Hydrological Services (NMHSs) of WMO Members of a specific region. The list eventually has to be approved by the respective tropical cyclone regional bodies.

Prime Minister Narendra Modi conducts an aerial survey of the areas affected by cyclone 'Tauktae'

Since India Meteorological Department (IMD) is a regional specialised meteorological centre (RCMC), the tropical cyclones developing over the north Indian Ocean, including the Bay of Bengal and Arabian Sea, are named by the departmentwhen they have reached the relevant intensity. In April 2020, IMD released a list of 169 names of future tropical cyclones that would emerge in the Arabian Sea and the Bay of Bengal. Cyclone 'Tauktae' is the fifth name to be used from the new list.

Why are cyclones named?

Since names are presumed to be far easier to remember than numbers and technical terms,tropical cyclones are named in order to help in their quick identification in warning messages. Naming cyclones also makes it easier for the media to report, heightens interest in warnings and increases community preparedness.

EN Explains

According to the World Meteorological Organisation, the use of short, distinctive given names in written as well as spoken communications is quicker and less subject to error than the older more cumbersome latitude-longitude identific-ation methods. These advantages are especially important in exchanging detailed storm information between hundreds of widely scattered stations, coastal bases, and ships at sea.

What are the criteria for a name to be selected for the list?

1. The proposed name should be neutral to (a) politics and political figures (b) religious beliefs, (c) cultures and (d) gender
2. Name should be chosen in such a way that it does not hurt the sentiments of any group of population over the globe
3. It should not be very rude and cruel in nature
4. It should be short, easy to pronounce and should not be offensive to any member
5. The maximum length of the name will be eight letters
6. The proposed name should be provided along with its pronunciation and voice over
7. The WMOpanel reserves the right to reject any name, if any of the criteria above is not satisfied.
8. The finalised names may also be reviewed during the course of time of implementation with the approval of the panel in its annual session, in case any reasonable objection is raised by any member
9. The names of tropical cyclones over the north Indian Ocean will not be repeated.Once used, it will cease to be used again. Thus, the name should be new. It should not be there in the already existing list of any of the RSMCs worldwide including RSMC, New Delhi.

As per the WMO guidelines, if a cyclone is particularly deadly or costly, the name is retired and never used again for any other cyclone.

Who are involved in naming the cyclones?

Worldwide there are six RSMCs and five regionalTropical Cyclone Warning Centres (TCWCs) mandated for issuing advisories and naming of tropical cyclones.IMD is one of the six RSMCs to provide tropical cyclone and storm surge advisories to 13 member countries under WMO/ESCAP (United Nations Economic and Social Commission for the Asia Pacific) Panel including Bangladesh, India, Iran, Maldives, Myanmar, Oman, Pakistan, Qatar, Saudi Arabia, Sri Lanka, Thailand, the United Arab Emirates (UAE) and Yemen.

IMD also invites suggestions from the general public for names to be added in the list, provided that the suggested name meets the fundamental criteria.

EMPLOYMENT OPPORTUNITIES IN THE INDIAN ...

fuel sector. Within the renewable energy space by 2050, solar and biomass sub sectors are estimated to be the biggest contributors driving up employment and contributing up to 2 Mn and 1.1 Mn employees, respectively.

India is the world's largest democracy boasting of a population of 1.36 Billion (Bn) (as of 2019) with a total labour force of 471,689,092 in 2020. India's numbers are also indicative of its growing young demography. Fortunately, the renewable energy sector offers plenty of job opportunities across the supply chain both, directly and indirectly. Not only is manpower needed in manufacturing but also in areas such as installation, system designing, operations and maintenance, financing, marketing, engineering, procurement, construction etc. This shows that the sector has the capacity to absorb not only skilled labour but also semi-skilled and unskilled labour.

Additionally, Prime Minister Narendra Modi's clarion call for 'Atmanirbhar Bharat' or 'Vocal for Local' has led to localisation of global supply chains. Since renewable energy is a thrust sector for India, it also entails increased jobs and employment in the economy for the sector.

India is also home to specialised institutes such as National Institute of Solar Energy (NISE), Sardar Swaran Singh National Institute of Renewable Energy and National Institute of Wind Energy (NIWE) which were founded by the government to support research and development and to strengthen the country's skilled manpower. In addition to such institutes, the Government of India, in 2015, also launched the Skill Council for Green Jobs (SCGJ) which is aligned to the National Skill Development Mission. The mission covers the entire gamut of green businesses and is supported by the Ministry of New and Renewable Energy (MNRE) and the Confederation of Indian Industry (CII). Many private institutes across India have also started offering specialised courses or programmes to skill the workforce appropriately.

In the recent years, India has emerged as a world leader in the renewable energy sector and continues to ramp up production within the sector. This considerable focus of the Indian government on developing clean energy is also coupled with an increase in job opportunities across the country. This vision and path of the Government towards clean energy is expected to be a boon for the Indian employment scene.
